

**Abstract of the Disclosur**

An integration tool is presented for integrating and/or commissioning a new device or system into a building control system. The integration tool is incorporated into the building control system and is operative to create one or more databases and/or applications for the new device that is then flashed to an appropriate building system controller. In one form, the present invention is a software tool for integrating a building control device into the building control system. In another form, the present invention is an integration tool for defining applications for new devices. In yet another form, the present invention is a seamless software tool that allows field personnel to create databases and define applications by simply following the defined point structure.
